Descriptif

The Vortex Viper HD 8x42 Binoculars has been improved in 2018, it has a wider field of view and now offers a more comfortable and clearer image. The Viper HD viewer has the patented XR anti-reflection coating that improves the contrast and color reproduction of the lenses. The powerful 8x magnification is designed for observing large game at extreme distances, such as in the open areas. In addition, these binoculars have a large lens diameter of 42 mm so that there is a lot of light in the binoculars. With the Viper 8x42 you have therefore good visibility in circumstances when there is little light available.

The Viper HD is a binocular which can resist an impact, the body is strong and offers a good grip. The Viper HD is filled with argon gas and equipped with o-rings. This makes it resistant to water.

The Vortex Viper HD comes with a Glasspak carrying bag that protects your binoculars when not in use. The Glasspak has a unique design that allows you to carry your binoculars protected in the bag on your chest. This way you carry your binoculars comfortably but it is always within reach if you need it quickly.

Usage Vortex Viper HD 8x42

With its 8x magnification, the Vortex Viper HD 8x42 is a perfect binocular for observations at great distances. Due to its large 42 mm lens, it is also suitable for use when there is little light available.
